

Universal Third Trimester Syphilis Screening

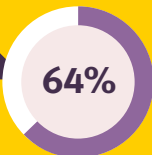

During Pregnancy

As recommended by the American College of Obstetricians and Gynecologists (ACOG) and endorsed by the New Jersey Department of Health (NJDOH)

Alert: Syphilis cases in New Jersey have surged

increase in total cases

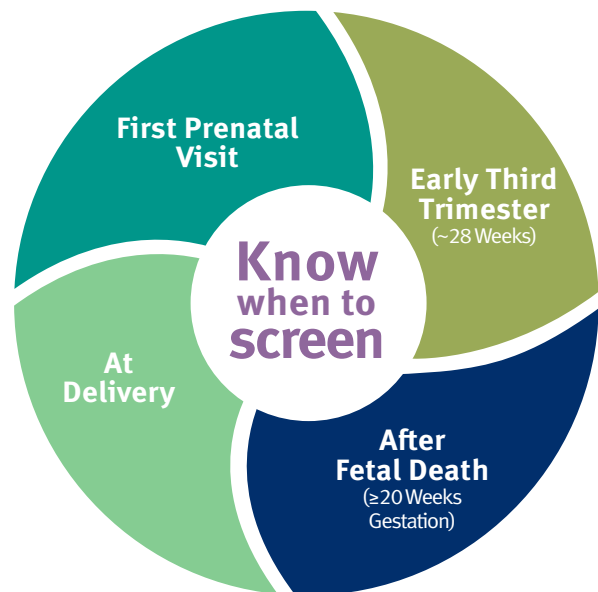

increase in syphilis among females (ages 15-44)

increase in congenital syphilis cases

The data set covers the period from 2019–2024.

Universal third trimester screening is now recommended for **all pregnant people.**

To confirm a positive result, a **complete** syphilis test includes

- ✓ **RPR** (Rapid Plasma Reagin)
- ✓ **Treponemal test** (e.g., FTA, TPPA)

Testing Protocol

Ensure electronic health record (EHR) lab orders include “reflex to confirmatory” to avoid delays.
